

Executive Overview

Weekly funnel health, priority issues, and model-supported review actions

Week Selected: Monday, January 25, 2021

Total Sessions

26.342K

Selected reporting week

Total Purchases

310

Sessions ending in purchase

Purchase Rate

1.18%

Purchases / sessions

Largest Issue Impact

58.12

Estimated lost purchases

Top 100 Precision

85.00%

Held-out test model result

Priority actions this week					
Rank	Issue	Evidence	Owner	Suggested action	priority
1	Google organic traffic: product view to cart drop-off	58.1 estimated lost purchases; 5.9% conversion gap.	Product / UX	Review product-page clarity, pricing visibility, and add-to-cart prompts for Google Organic Traffic.	high
2	Google organic traffic: shipping to payment drop-off	19.6 estimated lost purchases; 13.7% conversion gap.	UX / Engineering	Review shipping-to-payment flow, cost transparency, and payment-step messaging for Google Organic Traffic.	medium
3	Google organic traffic: cart to checkout drop-off	9.2 estimated lost purchases; 4.3% conversion gap.	UX / Ecommerce	Review cart-to-checkout friction, delivery messaging, and checkout call-to-action clarity for Google Organic Traffic.	review

Recommended focus this week			
Area	Focus	Evidence	Owner
Top Issues	Google organic traffic: product view to cart drop-off	58.1 estimated lost purchases; 5.9% conversion gap.	Product / UX
Model Evidence	Top 100 precision	Top 100 precision: 85.0%	Analytics / Growth
Intervention Groups	Late checkout recovery	100 sessions identified; median purchase likelihood was 71.6%.	Growth / Ecommerce
Intervention Groups	Browse drop-off review	50 sessions identified; median purchase likelihood was 0.0%.	Product / UX
Intervention Groups	Cart drop-off review	50 sessions identified; median purchase likelihood was 0.0%.	Product / UX

Funnel Diagnostics

Weekly funnel reach, step conversion, and drop-off patterns across the ecommerce journey

Week Selected: Monday, January 25, 2021

Sessions reaching each funnel step

Step-to-step conversion rate

Sessions lost by funnel transition

Product View-to-Purchase Conversion Trend

Funnel transition summary

Funnel transition	Sessions entering	Sessions reaching next	Conversion rate	Sessions lost	Drop-off rate
View → cart	6186	1086	17.6%	5100	82.4%
Cart → checkout	1086	580	53.4%	506	46.6%
Checkout → payment	580	427	73.6%	153	26.4%
Payment → purchase	427	310	72.6%	117	27.4%

Interpretation note: The funnel chart shows how many sessions reach each stage, while the conversion and drop-off charts identify the weakest transitions. These results are diagnostic only and should be interpreted as areas for review, not causal proof of why users leave.

Segment & Top Issues

Segment-level conversion gaps, estimated lost purchases, and ranked issue evidence

Segment type: Channel

Week Selected: Monday, January 25, 2021

Largest Issue Impact

58.12

Estimated lost purchases in top issue

Issue Candidates

7

Qualified segment-step issues

Largest Qualified Gap

13.72%

Largest gap versus weekly baseline

Top Issue Priority

high

Highest priority among latest issues

Estimated lost purchases by top issue

Top channel-step issues by lost purchases

Segment	Funnel step	Lost Purchases	Gap	Current Conv.	Baseline Conv.	Starting Sessions
Google organic traffic	Product view → cart	58.1	5.9%	11.6%	17.6%	3444
Google organic traffic	Shipping → payment	19.6	13.7%	59.9%	73.6%	197
Google organic traffic	Cart → checkout	9.2	4.3%	49.1%	53.4%	401
Google Merch Store referral traffic	Payment → purchase	5.9	3.2%	69.4%	72.6%	183
Unknown traffic	Product view → cart	3.1	9.2%	8.4%	17.6%	119
Direct traffic	Product view → cart	2.0	3.9%	13.6%	17.6%	176
YouTube Creator Academy referral traffic	Product view → cart	1.4	4.8%	12.7%	17.6%	102

All segments by estimated lost purchases

Recommended focus this week

Rank	Issue	Movement vs prev week	Evidence	Funnel area	Action category	Owner	Priority
1	Google organic traffic: product view to cart drop-off	⬆ Up	58.1 estimated lost purchases; 5.9% conversion gap.	Product discovery	Product page optimisation	Product / UX	high
2	Google organic traffic: shipping to payment drop-off	⬇ Down	19.6 estimated lost purchases; 13.7% conversion gap.	Shipping to payment	Cost and payment-step review	UX / Engineering	medium
3	Google organic traffic: cart to checkout drop-off	New	9.2 estimated lost purchases; 4.3% conversion gap.	Cart	Cart friction review	UX / Ecommerce	review

Interpretation note: Segment issues are ranked by estimated lost purchases and conversion gaps versus baseline. The page highlights where drop-offs are concentrated and which owner should review them, but the findings are diagnostic rather than causal.

Model Performance

How well the purchase propensity model ranks high-intent sessions

Week Selected: data split = test || model = final calibrated model

Top 100 Precision

85.00%

Purchases in top 100 reviewed sessions

Top 100 Recall

27.42%

Test purchases captured in top 100

Lift at Top 100 Sessions

72.23

Improvement over random review

Test Observation Count

26.342K

Held-out test sessions

Ranking evidence by cut-off

Review cut-off	Sessions review	Precision	Recall	Lift
Top 100	100	85.00%	27.42%	72.23
Top 250	250	81.60%	65.81%	69.34
Top 1%	264	81.06%	69.03%	68.88
Top 2%	527	58.82%	100.00%	49.98
Top 5%	1318	23.52%	100.00%	19.99

Model interpretation note: The model is a session-level purchase propensity ranking model. It prioritises sessions for review using pre-purchase signals such as behaviour, item specific calculations, funnel progression, device, geography, and traffic source. Precision, recall, and lift show how useful the ranking is for targeting a limited review group, while calibration improves probability reliability without changing the ranking.

Intervention Review Groups

Prioritised non-purchase sessions grouped by funnel drop-off stage and review action

Week Selected: Monday, January 25, 2021

Candidate sessions
200

Review groups
3

Late checkout candidates
100

Median Late checkout
71.55%

Candidate count by review group

Median purchase likelihood by review group

Candidates by channel and review group

Candidates by drop-off point

Top candidates to review within each intervention group

Group	Rank	Priority score	Priority band	Purchase likelihood	Channel	Device	Country	Last stage	Dropped after	Suggested action from drop off point
1. Late checkout recovery	1	1.00	Very high within group	73.49%	Google Merch Store referral traffic	mobile	Brazil	Payment	After payment	Check payment methods, failed payment signals, promo code errors, trust cues, and confirmation clarity.
3. Browse drop-off review	1	1.00	Very high within group	0.25%	Google organic traffic	desktop	Colombia	Product view	After product view	Check product relevance, detail clarity, price visibility, trust cues, and add-to-cart CTA placement.
1. Late checkout recovery	2	0.99	Very high within group	73.49%	Google Merch Store referral traffic	desktop	China	Payment	After payment	Check payment methods, failed payment signals, promo code errors, trust cues, and confirmation clarity.

Methodology & Trust

Pipeline design, validation checks, assumptions, and interpretation limits behind the dashboard

End-to-end GA4 decision pipeline

Trust checks and design choices

Trust area	Check / design choice	Why it matters	Used on
Decision outputs	Decision summary, insight pack, memo, audit, and manifest are saved	Supports reproducibility and reporting	Pages 1, 3, 5
Event-base processing	Flattened GA4 events into events_base with 4,295,584 rows	Raw GA4 export is nested and not dashboard-ready	Pipeline stage 1
Segment issue rules	Segment issues require volume, under-baseline conversion, and impact checks	Reduces noisy segment-step issues	Page 3
Time-based model split	Train, validation, and test periods are separated by week	Gives a more realistic held-out evaluation	Page 4
Funnel simplification	High-level visuals hide add_shipping_info where it duplicates begin_checkout	Avoids a redundant near-100% transition	Pages 1–2
Duplicate keys	Duplicate session groups = 0 and extra session rows = 0	Reduces risk of inflated session counts	Pages 1–5
Pre-purchase features	Event-count mismatches = 0, item-count mismatches = 0, post-purchase funnel steps = 0	Supports leakage control before modelling	Page 4
Session grain	Session, label, funnel feature, and item tables each contain 360,129 rows	Confirms the main session-level tables align	Pages 1–5

Assumptions and interpretation limits

Area	Assumption / limit	Impact	Mitigation
Data scope	Public GA4 ecommerce sample data	Patterns are directional, not current business truth	Use trends and prioritisation logic rather than absolute claims
Reporting window	Historical lookback window with 14 reporting weeks	No real-time monitoring or live refresh	Present as a reproducible capstone pipeline output
Funnel logic	Funnel steps are reconstructed from observed GA4 events	Unexpected event paths can affect conversion rates	Use validation checks and simplified high-level funnel visuals
Shipping step	add_shipping_info is hidden in high-level funnel visuals but retained in issue wording where useful	Shipping-to-payment can still appear as a ranked issue	Explain it as a deliberate dashboard design choice
Lost purchase estimates	Estimated lost purchases use baseline conversion gaps	Could be mistaken for exact commercial uplift	Use as a prioritisation estimate only
Causality	No A/B testing or causal inference is performed	Cannot prove an action will improve conversion	Validate with experiments or future monitoring
